## AirBox Lite

System Security - 20-300Pa, 100-1000 Pa & 500-2000 Pa

Geovent Airbox Lite is an air sensor (pressure switch / system monitor) which is suitable for monitoring process exhaust ventilation under workers health requirements.

AirBox Lite is equipped with a built-in pressure sensor, and comes in three pressure intervals:

- 20-300 Pa
- 100- 1000 Pa
- 500-2000 Pa

The control box meets minimum requirements of the Working Environment Authority, and is intended as a cheaper alternative to Airbox II, which has significantly more features.

The Airbox Lite is still easy to install.

The pressure switch shows green operation lamp is lit during normal operation of the ventilation system. If the pressure falls below the predefined set point, the red alarm light is activated.

If more than one room is monitored, you must connect external siren or lamp. In this case, the Airbox II is used.

Protection Class: IP 22
